

The screenshot shows a code editor with a Python script and its debug console. The script is as follows:

```

1 a = 5
2 b = 3
3
4 if a > b:
5     print("La variable 'a' ({a}) es mayor que la variable 'b' ({b}).")
6 elif b > a:
7     print("La variable 'b' ({b}) es mayor que la variable 'a' ({a}).")
8 else:
9     print("Ambas variables son iguales: a = {a} y b = {b}.")
10

```

The debug console on the right shows the following information:

- Breakpoints:** 4 main.py, 8 main.py
- Variables:**
 - special variables: a: int, b: int
- Call stack:**
